

Senior Engineer

Infrastructure Services

What is the purpose of this role?

The purpose of this role is to provide sound input, leadership and decision guidance in order to drive excellence, quality and performance for an IT service, across one or multiple portfolios.

What are the key responsibilities of this role?

- Undertake solution design and engineering of reusable IT services, to provide business value across multiple programmes and initiatives.
- Analyse a wide range of technical data within systems and processes, to anticipate and address problems, or identify improvement opportunities
- Provide specialist knowledge on engineering solutions, and emergent IT services that may benefit the Group's strategic direction
- Ensure the utility of accountable IT services is maintained, with proactive management strategies implemented to maintain alignment to target architecture
- Provide technical direction for system scope issues during proposals and design activities to assist with business service development
- Ensure all services within the IT service portfolio are managed with consideration to network, capacity, platform, sociability/scalability factors and target architecture

What does 'AMAZING' look like?

- Strong technical experience and understanding of technology
- Experience in IT architecture or design
- Specialised knowledge of development and design methodologies
- Technology or related qualifications
